

AKYOLBIL – Istanbul Smart Bus/Busstop Project

CUSTOMER: IETT (Istanbul Transport Authority)

SCOPE: 6000 public transportation vehicles

IMPLEMENTATION:

- Retrieving position data of 6000 buses through GPS and transmission thereof to host servers via GPRS,
- Central tracking and management of all vehicles,
- In line with data collected from vehicles, calculation of estimated arrival times of buses to bus-stops and displaying this information on LCD information screens in busses and smart bus-stops,

- Adaptation of announcement systems in buses,

- Consultancy service for developing the operating system embedded in the smart travel computer.
